### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

**Title**, page 1 of the specification, please replace the term "Method" with the phrase -- Method of Insulating a Subsea Structure --.

### **REASONS FOR ALLOWANCE**

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or suggest a method of insulating a subsea structure, as recited in independent claim 7, that comprises injecting into the structure a substance comprising a hydrocarbon; and allowing said substance to form a gel having a dynamic viscosity of more than 1000Pa.S, wherein the substance comprises spheres having hydrocarbon gas enclosed therein. Nor does the prior art of record teach or suggest a method of insulating a subsea structure, as recited in independent claim 10, as currently amended, that comprises injecting into the structure a substance comprising a hydrocarbon; and allowing the structure to form a gel, wherein the formed gel has a dynamic viscosity of more than 2000 Pa.S, wherein the subsea structure comprises a conduit enclosing a second conduit, and wherein hydrocarbons are recovered within the

second conduit. **(Examiner notes that written description support for Applicant's current amendment to independent claim 10 limiting the dynamic viscosity of the gelled substance/material to 2000 Pa.S can be found on page 4, lines 24-28 of the present specification.)**

3. The closest prior art is USPN 4,941,773 to Vergrow et al., hereinafter 'Vergrow'. Vergrow discloses adding heat insulation in the form of gelling material to underwater pipeline bundles and filling space within the pipeline bundles with heat insulation, wherein the dynamic viscosity of the gel after its gellation is between 10 and 1,000 Pa.S. However, Vergrow does not teach or suggest adding microspheres having enclosed hydrocarbon gas therein to the insulation material used for insulating the subsea structure. Nor does Vergrow teach forming a gel having a dynamic viscosity of more than 2000 Pa.S, wherein the subsea structure comprises a first/outer conduit enclosing a second/inner conduit, and wherein hydrocarbons are recovered within the second conduit.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
